Waukesha, Wisconsin 53188-1020

June 27, 2008

Dear Citizens of the Town of Somers:

The Town of Somers is a vibrant municipality quickly approaching a population of 10,000 people located within the fastest growing corridor surrounding the Great Lakes. As predicted many decades ago, the Town is in the middle of the convergence of the Chicago and Milwaukee metropolitan areas providing plenty of living and employment opportunities. The mainly agrarian community with scattered highway oriented commercial land use has shifted to become part of a super region served with major transportation routes and major institutions of higher learning. With the current and projected growth it is imperative that the Town set forth plans and policies to chart its future of proper growth that recognizes its past. For some, the change is occurring too rapidly, and for others, not fast enough. Nonetheless, the Town has become part of an area that is changing so that Town officials must balance the public good of its citizens versus the right of reasonable use of property ownership.

Hawthorne Neighborhood Plan is part of 16 Neighborhood Plans prepared by the Town Board and Town Planning Commission with the assistance of Municipal Economics & Planning, a division of Ruckert/Mielke, over a 1-1/2 year period of 2007-2008. The plans are intended to provide land use guidance to the Town until the year 2035 and beyond, as part of the Land Use Element for the Town to be included with the Town's participation in the Kenosha County Multi-Jurisdictional Comprehensive Plan. The County Plan, with these Neighborhood Plans, will combine to provide a Comprehensive Smart Growth Plan as required by the State of Wisconsin under State statute Section 66.1001.

The land area planned in the 16 Neighborhood Plans represents approximately 75% of the total land area currently within the Town boundaries. The remaining 25% of the Town is a part of other planning efforts, which are:

- the area of the Town that will ultimately be within the City of Kenosha;
- the previously prepared Parkside East Neighborhood Plan;
- the North Lakeshore Neighborhood Plan accomplished under a separate process;
- the Far Northwest corner of the Town that will remain planned for agricultural land uses until which time conditions exist to expand the Sanitary Sewer Service Area Plan to service that part of the Town.

Letter to Town of Somers

Page 2

Town Setting

The Town of Somers is located in the far northeast corner of Kenosha County. The City of Kenosha forms the Town's southern border, as most of the northern one-half of the City was part of the original Town jurisdiction. The Town of Paris is located to the west on the west side of I-94. Within Racine County to the north, Somers borders the Village of Mt. Pleasant.

The Town has a fully functioning government to serve its citizens and businesses. An elected Town Chair and four Town Supervisors oversee Town operations and set policy direction. The Town has a full-time Administrator, Clerk-Treasurer, and Financial Manager. Paid on-call volunteers provide fire protection. The Kenosha County Sheriff department provides fire protection for the Town.

A seven-member Plan Commission recommends land use policy to the Town Board in the form of review of development proposals, review of land divisions, and review of zoning district boundary amendments. To implement planning policy, the Town is under Kenosha County zoning, administered by the Kenosha County Department of Planning and Development. The Town Board and Plan Commission work cooperatively with the Department of Planning and Development.

School age children in the Town attend kindergarten through twelfth grade at schools provided by the Kenosha Unified School District, or attend private schools in the area. Shoreland Lutheran High School is located within the Town.

The decade of the 1960s saw the establishment of higher education in and around the Town. In 1962, Carthage College was relocated from Illinois to its current lakeshore site abutting the Town border. Later in the 1960s, the University of Wisconsin Board of Regents founded University of Wisconsin - Parkside. The 5,000 student campus is located near the heart of the Town.

Town Growth

Population growth in the Town has been steady since World War II and has kept pace with the Kenosha County population growth. See Appendix B for population growth since 1980.

Within the State of Wisconsin, towns were originally organized as local units of government to provide for the minimal needs required to serve the farming community. Towns adjacent to incorporated cities or villages were historically dependent upon those incorporated communities for goods and services. Cities and villages viewed the towns as opportunities for the natural expansion of the built environment.

Letter to Town of Somers
June 27, 2008
Page 3

In recent decades, towns have undertaken a new role of providing additional services to citizens that have chosen to live outside the more densely populated cities. The Town of Somers has experienced growth for a much longer time period due to its location between major cities and access to those cities via main transportation routes, added with major employers, such as UW-Parkside. Neighboring towns with the I-94 major transportation corridor as their western border have mirrored each other's growth patterns. In fact, to the south, the Town of Pleasant Prairie, and to the north, the Towns of Mt. Pleasant and Caledonia in Racine County, are now all incorporated as Villages.

Recognizing a need to continually work together, in 2005 the City of Kenosha and the Town of Somers, along with their utilities, signed an agreement to continue cooperative planning. The "2005 Cooperative Agreement, by and between the City of Kenosha and Kenosha Water Utility, and Town of Somers, Somers Water Utility and Somers Sewer Utility District" was established along with the "City of Kenosha/Town of Somers Cooperative Plan". The documents created the opportunity for the City of Kenosha and its utilities to provide sanitary sewer service and public water service to the growth areas of the Town, and clearly established ultimate boundary between the City and the Town, thereby allowing each municipality to properly plan for the orderly growth and development of each jurisdiction.

Implementation of the Cooperative Agreements have already occurred with capital improvements within the Town to extend the sewer and water facilities and the preparation of this Hawthorne Neighborhood Plan.

Projected Growth

The 16 Neighborhood Plans depict proposed land uses for residential ranging from low density to high density; mixed use for accommodation of residential and commercial entities; nonresidential in the form of commercial, offices, business parks, and industrial parks; publicly owned spaces; and recreational opportunities. A generalized breakdown of planned land uses in the Town areas follows. Please see Appendix D for a detailed table of planned land use acreage.

- Residential: 46.4%
- Mixed Use: 4.1%
- Nonresidential: 17.9%
- Public: 8.3%
- Recreational: 23.3%

Within each broad category, each Neighborhood Plan projects the residential and nonresidential growth within the Neighborhood in five year increments. The increase in

Letter to Town of Somers
June 27, 2008
Page 4

population from the 16 Neighborhoods is projected to be 21,129 by 2035, using the factor of 2.43 people per household matching the ratio being used by the Southeastern Wisconsin Regional Planning Commission (SEWRPC) for the County-wide plan. The potential population increase in addition to the estimated 2007 population of the Town of 9,361 could increase the population of the Town to around 30,490. A detailed residential phasing schedule is included in Appendix E. (Please remember that the 16 Neighborhood Plans do not represent the entire Town and property owners in the Town, and the acreages could change based on planning within other Town areas not part of this planning process.)

Please remember that there are many factors that could alter the potential population of the Town. Such factors include:

- The projected population includes only the existing population and population based on land uses of 16 neighborhoods.
- The population in the planned 16 neighborhoods is based on full buildout developed at the maximum planned benefits.

The rate of residential growth for the Town is consistent with the either current or projected population of similar sized municipalities within the Chicago-Milwaukee growth corridor. The consistency is similar in dwelling unit density since the overall density of 1.6 dwelling unit per acres is projected within the Neighborhood Plans, or in other words, less than 2 dwelling units per acre throughout the Neighborhood Plans.

A standard objective of the Town is to create opportunities for commercial and business growth to offset the residential growth that assists in providing a balanced tax base. Appendix F includes a table presenting a phasing schedule for the projected square footage of nonresidential growth projected within the 16 Neighborhood Plans in five year increments.

The future square footage of business uses within the Town is based on a calculation with 20 percent of the planned area used and/or reserved for right-of-way, and a floor area ratio equal to 30 percent of the remaining acreage.

The projected growth numbers within each Neighborhood Plan, in five-year increments in 2035, represents a theoretical calculation if each property at each designated land use is fully developed. Neighborhood planning within the Town and in surrounding municipalities has proved that it is nearly impossible for neighborhoods to develop at the highest densities projected in the Neighborhood Plan. Numerous reasons for this occurrence include the pace of development is set by a willing seller and willing buyer, the economy and market for new development, and that detailed site planning for individual properties must conform to a variety of State, county, and town land development standards.

Letter to Town of Somers
June 27, 2008
Page 5

Using the Neighborhood Plans

This Hawthorne Neighborhood Plan and the other 15 Neighborhood Plans present a guideline for future decision making on behalf of the Town in conjunction with other Town goals, objectives and policies. This Neighborhood Plan is one component of the Land Use Element of the Kenosha County Multi-Jurisdictional Smart Growth Comprehensive Plan that is focused on the Town of Somers planning direction. This Plan presents a map of proposed land uses with written text that presents key factors and points to be considered when the Town faces a land use decision for any of the properties within the neighborhood. Likewise, this Neighborhood Plan must be implemented in conjunction with all other factors of the other eight elements within the Town's portion of the Kenosha County Multi-Jurisdictional Smart Growth Comprehensive Plan, along with detailed implementation tools that the Town has established or will establish to implement those elements.

Some of the factors that must be considered when considering a land use decision in conjunction with this Neighborhood Plan, includes:

- Availability of public sanitary sewer to service the proposed land use, along with the potential public costs versus the benefits of providing the sewer to the site.
- Availability of public water supply to service the proposed land use, along with the potential public costs versus the benefits of providing the sewer to the site.
- Consideration of the public costs versus the benefit of providing police and fire protection to the subject site.
- Detailed knowledge of the exact delineation and protection standards of environmental features on each site, including protecting and buffering around wetlands, protecting primary environmental corridor within regional guidelines, protecting floodplains, and proper storm water and water quality management.
- Providing recreational open space opportunities to benefit of the entire Town, and residents of each neighborhood in the form of active and passive parks and recreational corridors, trails and paths, in accordance with park planning within the Town.

The Town must continue its cooperative relationship in working with Kenosha County in implementation of this Plan through proper zoning standards. Each proposed land use category shown within the Neighborhood Plans is designed to coordinate with an existing zoning category within the Kenosha County Zoning Ordinance.

Lastly, the implementation element of the Kenosha County Multi-Jurisdictional Comprehensive Plan contains provisions for amending the Plan. That rational process must be followed to address change in conditions. As this Plan projects out to 2035 and beyond, it is impossible to anticipate exactly conditions will be in place at that time. The Town must be willing to consider those changing conditions within the confines of proper land use decision

Letter to Town of Somers
June 27, 2008
Page 6

making for the good of the entire Town, balancing the rights of private property ownership versus the public good.

It is my distinct pleasure to present this Hawthorne Neighborhood Plan to guide future generations of land use decisions for the betterment of the Town of Somers.

Very truly yours,

ORDINANCE NO. 08-007

AN ORDINANCE TO CREATE SECTION 18.37
OF THE CODE OF ORDINANCES OF THE TOWN OF SOMERS
RELATING TO ADOPTION OF A COMPREHENSIVE PLAN

The Town Board of Supervisors of the Town of Somers, Kenosha County, Wisconsin, hereby creates Section 18.37 of the Code of Ordinances of the Town of Somers relating to the adoption of a comprehensive plan to read as follows:

18.37 COMPREHENSIVE PLAN.

(A) **Authorization.** Pursuant to Sections 62.23(2) and (3), Section 61.35 and Section 60.22(3) of the Wisconsin Statutes, the Town of Somers is authorized to prepare and adopt a comprehensive plan as defined in Section 66.1001(1)(a) and 66.1001(2) of the Wisconsin Statutes.

(B) **Public Participation.** The Town Board of the Town of Somers, Wisconsin, has adopted written procedures designed to foster public participation in every stage of the preparation of a comprehensive plan, as required by Section 66.1001(4)(a) of the Wisconsin Statutes.

(C) **Scope of Comprehensive Plan.** The Plan Commission of the Town of Somers, by a majority vote of the entire Commission recorded in its official minutes, had adopted a resolution recommending to the Town Board the adoption of the document entitled "A Comprehensive Plan for the Town of Somers", containing all of the elements specified in Section 66.1001(2) of the Wisconsin Statutes and identifying and affecting the following neighborhoods:

- (1) Country Club
- (2) Fairfield
- (3) Hawthorne
- (4) Kilbourn
- (5) Kilbourn South
- (6) Northwest
- (7) Parkside
- (8) Parkside North

- (9) Pike Creek
- (10) Pike River West
- (11) Somers Center East
- (12) Somers Center West
- (13) Somers West
- (14) South Central
- (15) Southeast
- (16) Southwest

(E) **Adoption of Plan.** The Town Board of the Town of Somers, Wisconsin, does by the enactment of this ordinance, formally adopt the document entitled "A Comprehensive Plan for the Town of Somers", as may be amended from time to time, pursuant to Section 66.1001(4)(c) of the Wisconsin Statutes.

(F) **Effective Date.** This ordinance shall take effect upon passage by a majority vote of the members-elect of the Town Board and publication or posting as required by law.

Dated at Somers, Wisconsin, this 10 day of June, 2008.

THE HAWTHORNE NEIGHBORHOOD PLAN: CURRENT CONDITIONS

Location

The Hawthorne Neighborhood, highlighted in the graphic below, is near the center of the Town of Somers. The neighborhood is located to the north of County Trunk Highway E (12th Street) and is approximately 654 acres in total area.

The Town of Somers and its neighborhoods are shown in the graphic below. The irregular black line in the southeastern part of the map indicates the current location of the municipal boundary between the City of Kenosha and the Town of Somers. In that vicinity, there are lands currently in the Town and within the City Growth Area, and therefore not included in the Town's neighborhood planning effort. Because those properties may be attached to the City of Kenosha through provisions in the *City of Kenosha/Town of Somers Cooperative Plan* land use plans for those properties are the responsibility of the City rather than the Town.

Map 1: Hawthorne Neighborhood Location

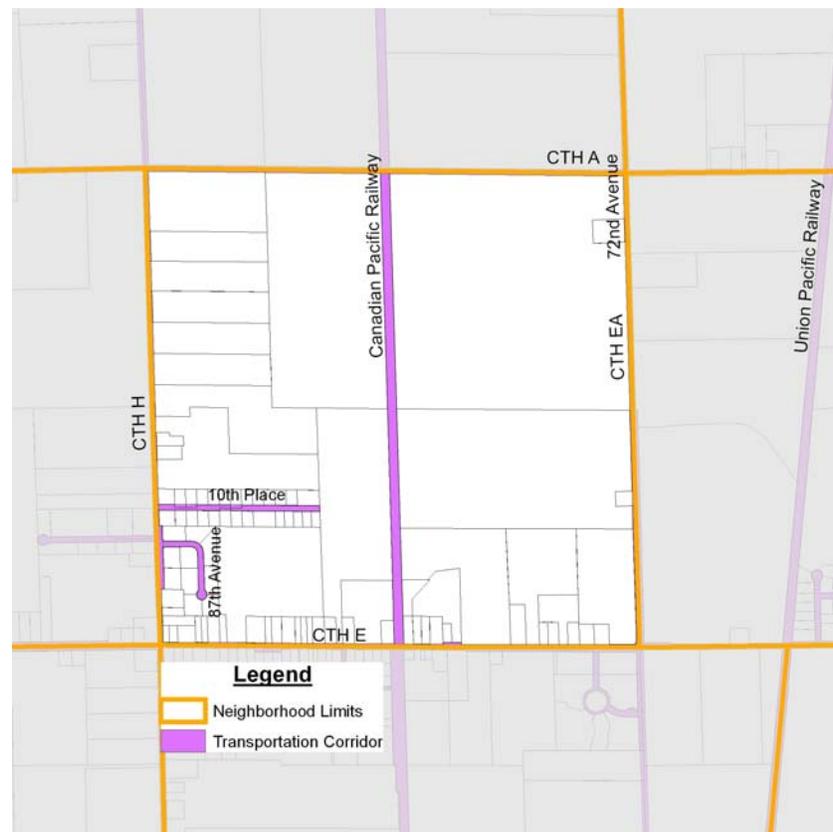

Streets, Roads, and other Transportation Facilities

Future land uses and transportation are closely related to one another since different land uses contribute to increases or decreases in vehicular traffic volume, and both transportation accessibility and volume are often determining factors with regard to land use. For example, the best location for a new residential subdivision may not be next to a transportation route that experiences extremely high traffic flow at a high rate of speed, yet heavily traveled, high volume thoroughfares are highly desirable for commercial purposes.

County Trunk Highways A, E, EA and H create the boundaries of the Hawthorne Neighborhood. The Canadian Pacific Railway

bisects the Hawthorne Neighborhood in a north-south direction. The southern portion of the neighborhood has been developed along CTH E, 10th Place and 87th Avenue.

Map 2: Transportation Facilities

Public Transportation

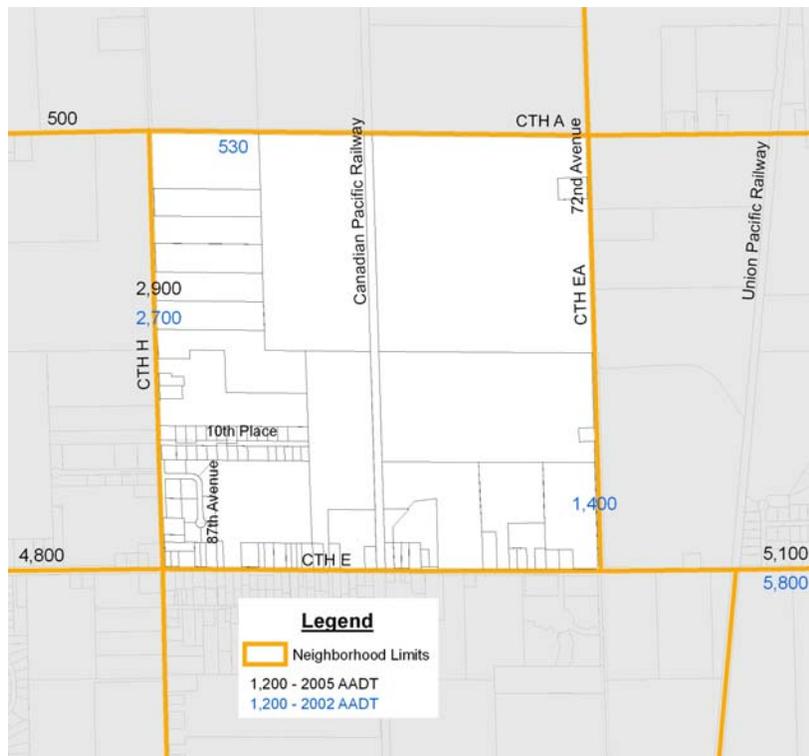

The City of Kenosha operates the local public transit service. There are not any current routes near the Hawthorne Neighborhood. The closest route is located near the University of Wisconsin – Parkside along 12th Street.

Traffic Counts

Roadway	Location of Count	Annual Average Daily Traffic (2002)	Annual Average Daily Traffic (2005)	Change	Percent Change
CTH H	North of CTH E	2,700	2,900	200	7.4%
CTH EA	North of CTH E	1,400	--	--	--
CTH E	West of CTH H	--	4,800	--	--
	East of CTH EA	5,800	5,100	-700	-12.1%
CTH A	East of CTH H	530	--	--	--
	West of CTH H	--	500	--	--

SOURCE: Wisconsin Department of Transportation

In 2005, the State of Wisconsin Department of Transportation (WisDOT) conducted traffic counts on roadways in Kenosha County creating the Annual Average Daily Traffic (AADT). As illustrated on the accompanying map, County Trunk Highway E (CTH E) accommodated an average of 4,800 AADT, or average number of vehicles per day, just west of the neighborhood and 5,100 AADT immediately east of the neighborhood in 2005. On the eastern portion of CTH E, AADT decreased roughly twelve percent between 2002 and 2005.

As illustrated on the accompanying map, County Trunk Highway E (CTH E) accommodated an average of 4,800 AADT, or average number of vehicles per day, just west of the neighborhood and 5,100 AADT immediately east of the neighborhood in 2005. On the eastern portion of CTH E, AADT decreased roughly twelve percent between 2002 and 2005.

The traffic volume along CTH H was measured in 2002 and 2005 along the western edge of the neighborhood. Traffic on CTH H increased 7.4 percent to 2,900 vehicles per day.

The traffic volume on CTH A along the northern boundary

of the neighborhood is extremely light. In 2002, the total number of vehicles per day was 530, which dropped to 500 in 2005.

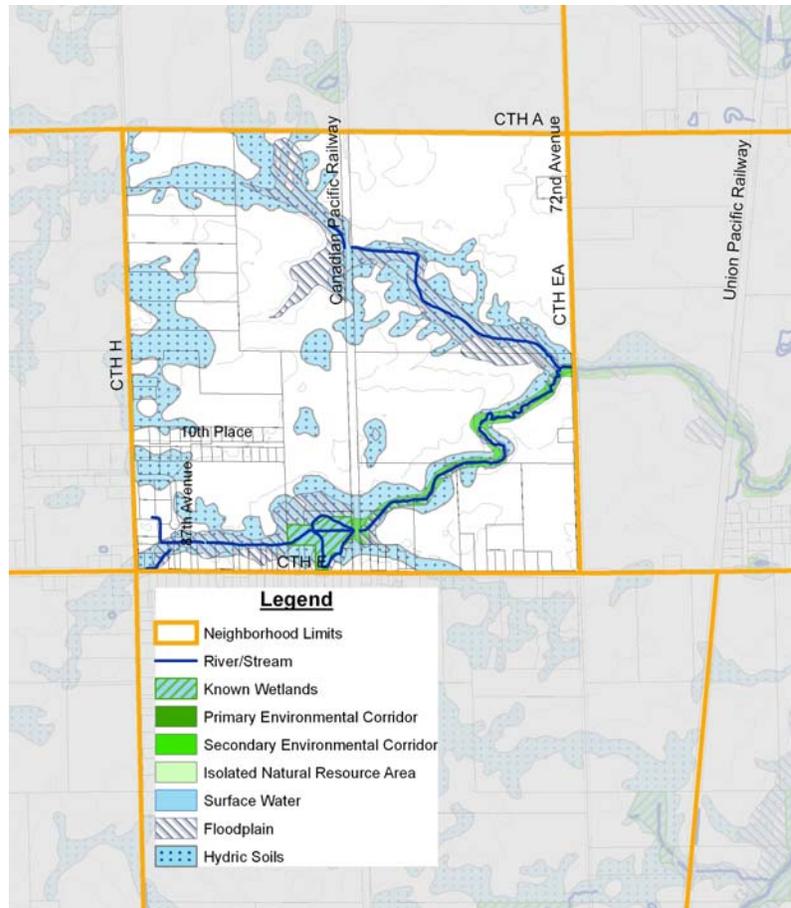

Trends in traffic volume offer insight for future land use planning. The CTH E corridor is known as the Town Center or ‘village’ portion of the Town. Future land uses along STH 31 and CTH E could be a major factor for increased traffic volume in the future.

Topography, Natural Features and Wetlands

The Hawthorne Neighborhood has gently sloping topography generally sloping toward the tributaries to the Pike Creek. The tributaries to the Pike Creek flow toward the east to a point where they intersect with the Pike Creek. The tributaries to the Pike Creek include extensive floodplains and pockets of wetlands extending significant distances from the tributary itself.

Secondary environmental corridor has been identified along the tributary to the Pike Creek. The secondary environmental corridor includes the stream, wetlands, and portions of the floodplains. The secondary environmental corridor is a valuable natural resource found in the neighborhood along with the wetlands with wetland buffers and floodplains. These areas should be protected from future development to preserve the environmental benefits

Map 4: Natural Features

Extensive areas within the Hawthorne Neighborhood include soil types typically known as hydric soils. Hydric soil is formed under conditions of saturation, flooding or ponding and is often not well suited to development. Generalized locations of these soil types are shown on Map 4; it is necessary to undertake individual site investigation to determine the feasibility of future development at sites with identified hydric soils.

THE HAWTHORNE NEIGHBORHOOD PLAN: CURRENT LAND USE

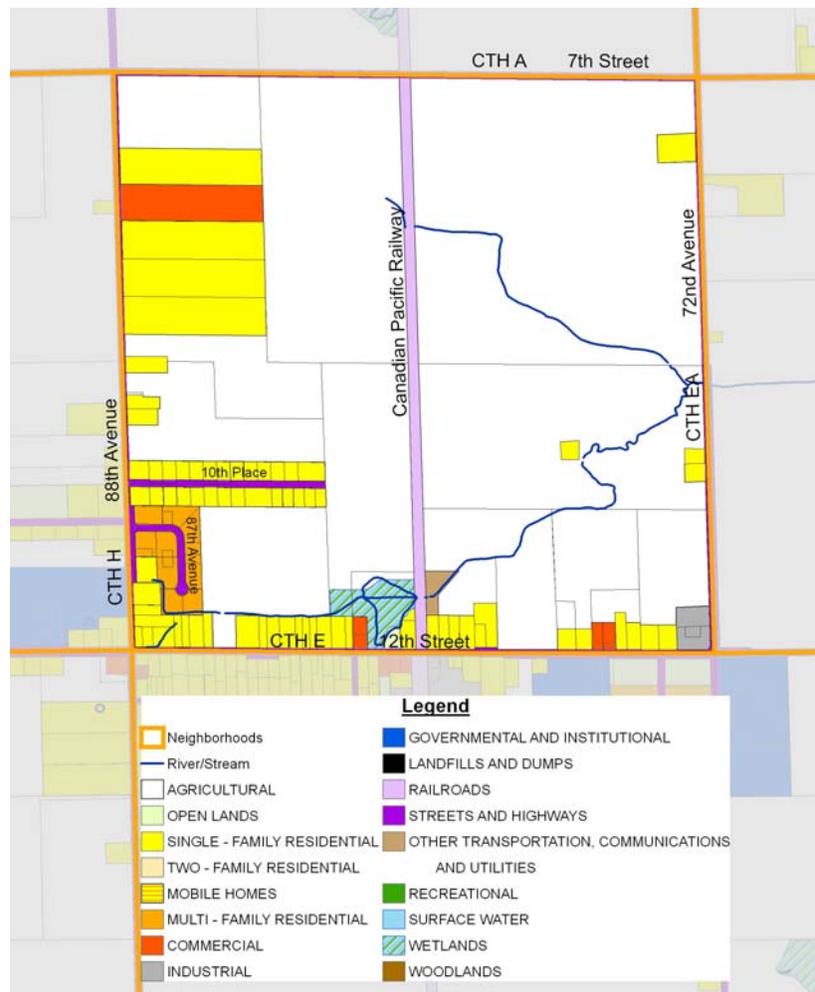

In 2005, land uses included agriculture/open space, residential, commercial, industrial, and communications and utilities. The vast majority of land within the Hawthorne Neighborhood largely remains in agricultural use. The agricultural uses in the neighborhood are mostly found

within the interior with residential and other uses along the perimeter.

Map 5: Year 2005 Land Use

Residential land uses are mostly located in the southern portion of the neighborhood along CTH E, 10th Place, and 87th Avenue. Tenth Place and 87th Avenue are interior streets within the neighborhood. Single-family residential has been developed along 10th Place and multi-family residential along 87th Avenue. Other residential land uses in the neighborhood include single-family homes along the perimeter of the neighborhood.

Several areas of commercial and industrial uses are located along CTH E in the 'village' portion of the Town with a single commercial use located along CTH H.

An industrial use was identified at the intersection of CTH EA and CTH E.

A significant wetland has been identified adjacent to CTH E, which must be preserved with any future development. An area identified as communications and utilities is located north of the residential uses along CTH E.

Current Zoning

The zoning in the Hawthorne Neighborhood closely reflects the land uses found in the neighborhood as of the year 2005. The lands identified as agriculture land use are zoned for that purpose. A large area in the southwest portion of the neighborhood has been identified as Agriculture – Holding. This area is to be preserved for urban growth and development. The County must review these areas every other year to determine if the areas represent lands with elevated pressure to develop.

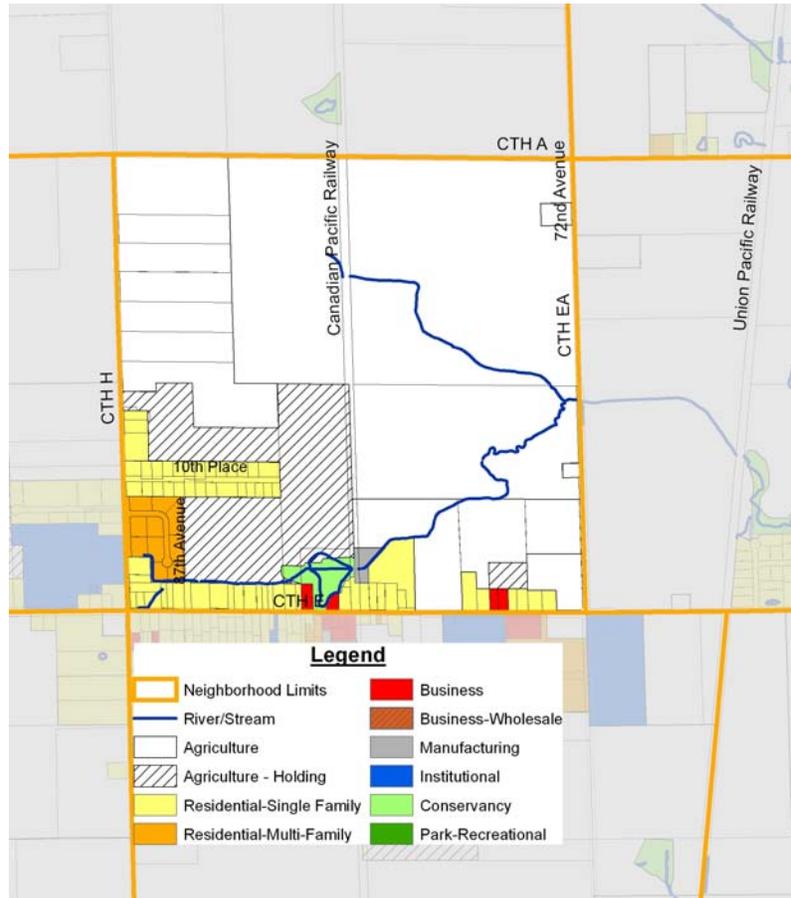

Residential land uses are divided into single-family and multi-family zoning. Single-family residential zoning is located along 10th Place and CTH E. Multi-family residential zoning for apartments is located along 87th Avenue.

The significant wetland adjacent to CTH E has been zoned as Conservancy to ensure that the environmental benefits from the wetlands remain protected into the future.

Business and manufacturing zoning districts are located in areas that were identified as being a non-residential land use located along CTH E.

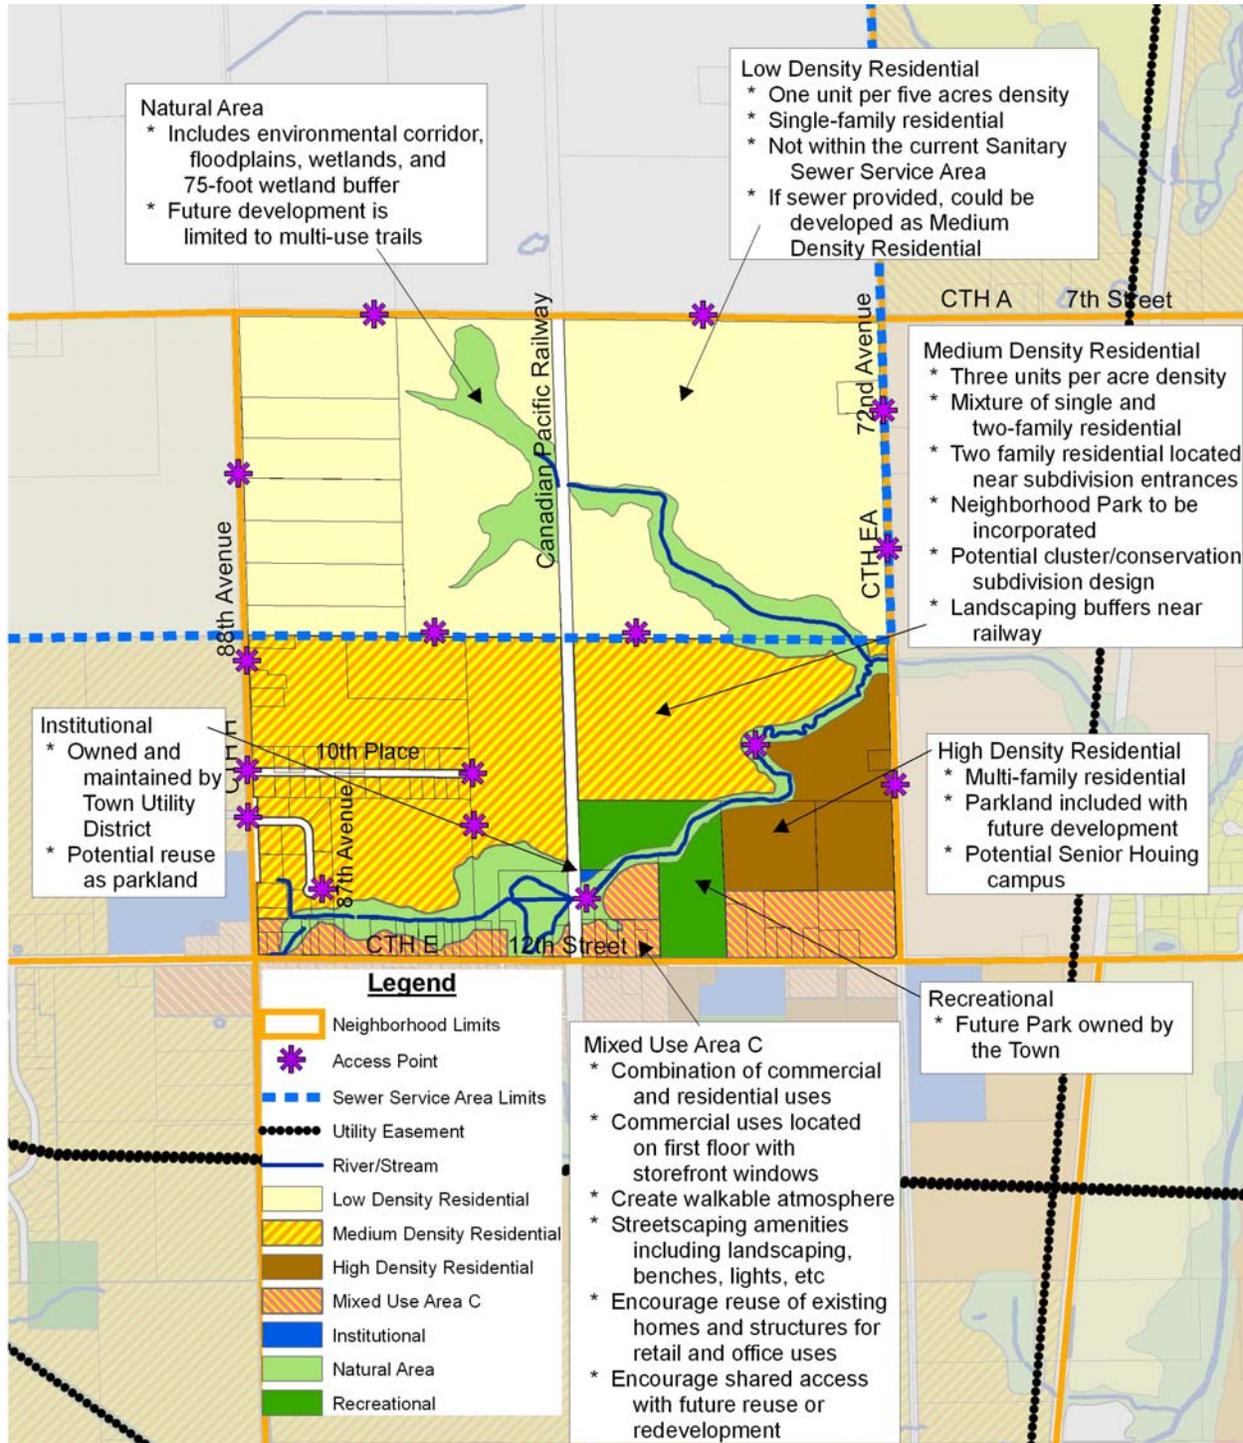

There are three differences between 2005 land use and current zoning. These differences include the area along the northern portion of CTH H where large lots are used for residential and commercial purposes but zoned Agriculture, the industrial land use at the corner of CTH EA and CTH E that has not been zoned for manufacturing, and the communications and utilities land use is zoned as manufacturing.

Map 6: Current Zoning

THE HAWTHORNE NEIGHBORHOOD PLAN: FUTURE LAND USE

Map 7: Future Land Use

This section of the Hawthorne Neighborhood Plan details proposed land uses and anticipated development potential. Proposed land uses within the Hawthorne Neighborhood include low, medium and high-density residential, mixed-use area C, institutional, recreational, and natural area. These land uses were derived by considering all available information and applying responsible planning principles. The planned land uses are intended to protect the environmental features including wetlands, surface water, waterways and its associated floodlands. The map incorporates existing land uses when appropriate, following an overall evaluation of existing uses throughout the neighborhood.

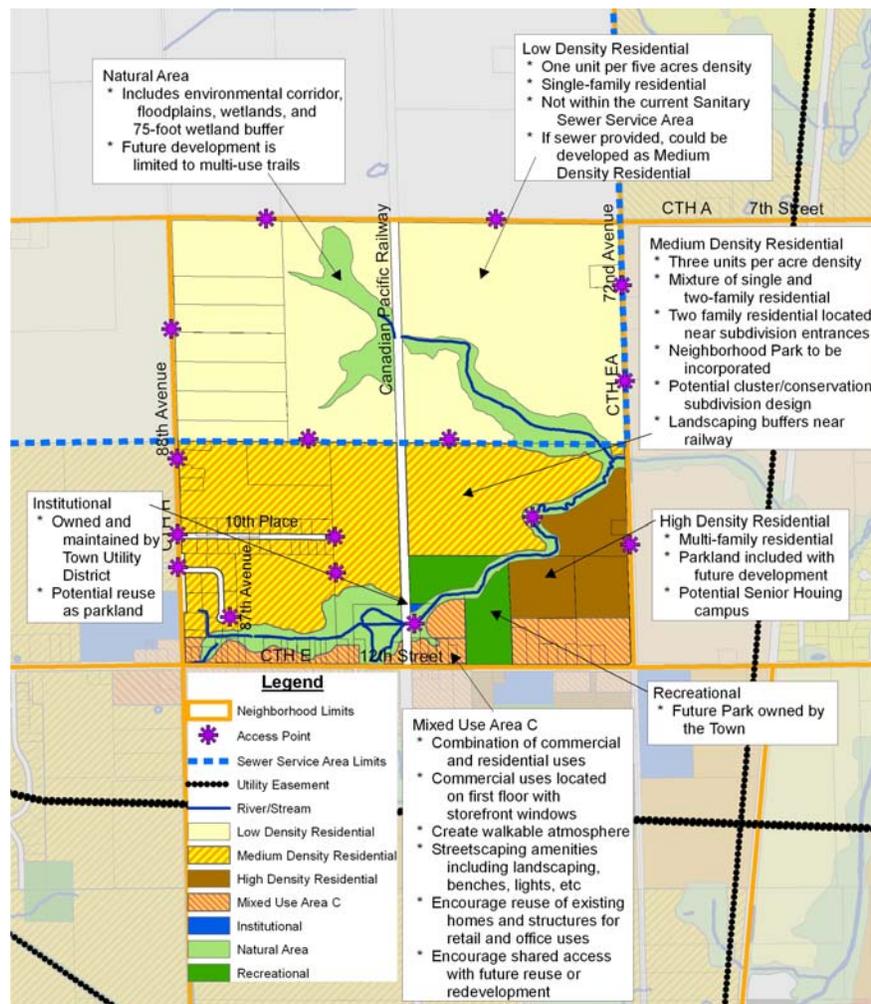

The Hawthorne Neighborhood is adjacent to the Town Hall and a portion of the CTH E corridor known as the ‘village’ portion of the Town due to past development and land uses. The corridor, being the cultural center of the Town, includes higher density residential development surrounding the uses along CTH E. The Hawthorne Neighborhood is located approximately one-half mile from the location of sewer and water infrastructure that will allow development to occur in the near future and at a higher density.

Low Density Residential (light yellow)

The Low Density Residential area is located in the northern half of the Hawthorne Neighborhood. Residential uses could be developed at a density of one dwelling unit per five acres with an emphasis on preserving the natural areas.

The low-density residential area is outside of the current sanitary sewer service area. If the sewer service area is adjusted and sewer and water are provided to the area, the low-density area could be developed as medium-density residential.

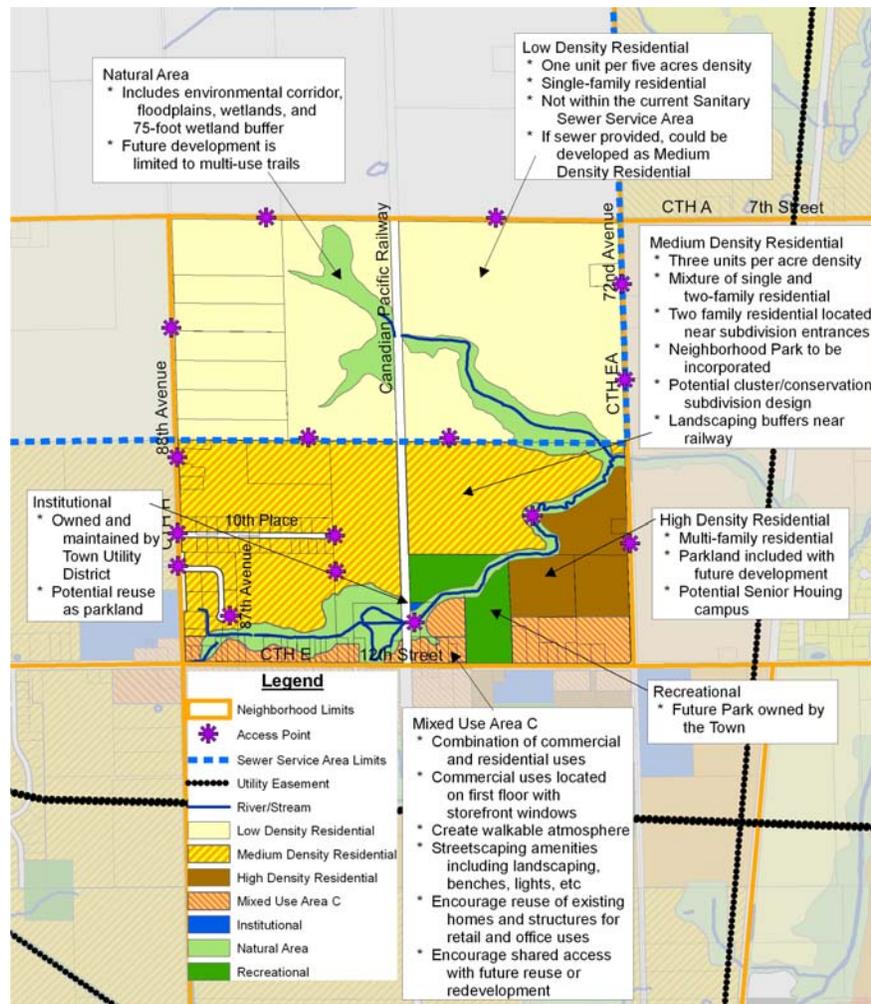

Access to the low-density area is from individual driveways abutting the County Trunk Highways.

The low-density residential area near the center of the Hawthorne Neighborhood is nearly impossible to access due to the stream and the Railway. There are two locations currently used to access the medium-density and institutional uses, identified on the map. Future development in this area of the low density residential will require two suitable access points with appropriate approvals.

Medium Density Residential (yellow with orange cross-hatch)

The Medium-Density Residential area could be developed in the future with a mixture of single and two-family residential uses at a density of three units per acre. Due to the large area of land that could be developed at a three unit per acre density, a neighborhood park must be required to assist the Town with the provision of recreational opportunities for residents of the Town. The neighborhood park could be linked to a trail system following the natural area to the Pike Creek. To alleviate increased traffic volumes associated with two-family residential buildings, the two-family developments could be located nearest the entrances to future subdivisions.

The Canadian Pacific Railway separates the medium-density residential areas. There is not any internal access over or under the railway within the neighborhood.

Future vehicular access points have been identified at the ends of 10th Place and 87th Avenue as well as along the exterior of the medium density residential areas; these are indicated with purple asterisks on Map 7. A significant internal road network is necessary with further development of this area.

Along the eastern side of the neighborhood, the medium density residential area will require suitable access with appropriate approvals for any future development.

The medium density area identified within the Hawthorne Neighborhood has specific limitations that include:

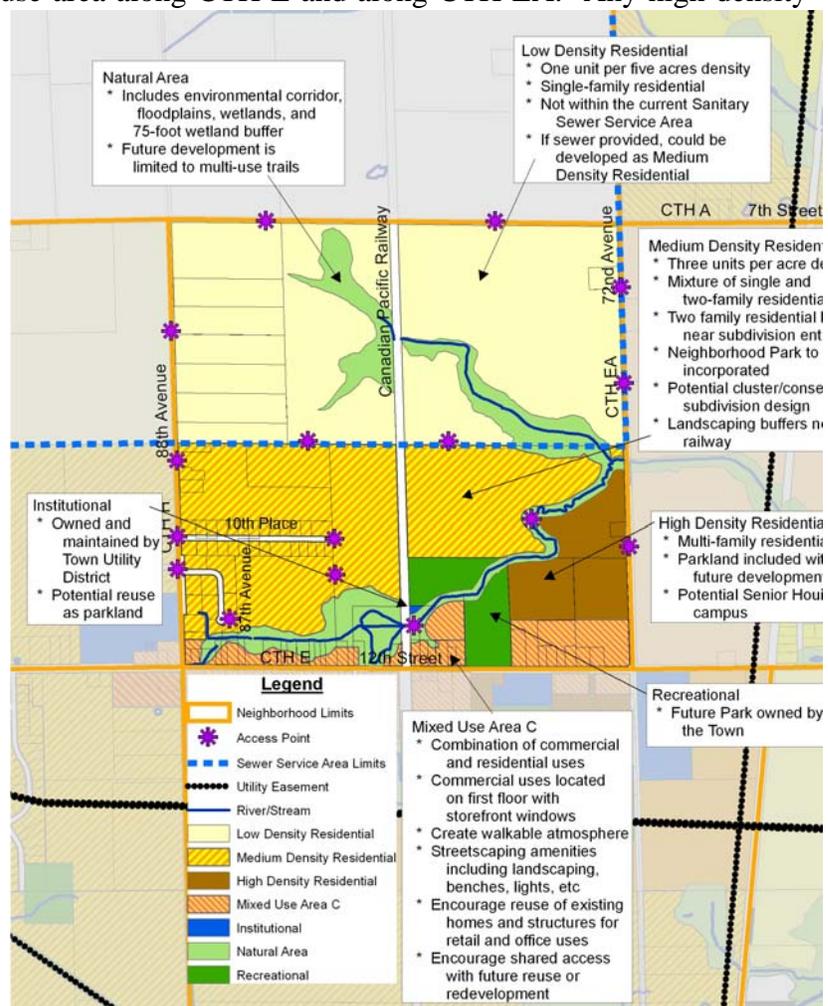

- East of the railway, suitable access points crossing the tributary streams to the Pike Creek must be established and approved by State and County personnel.
- The access point along 87th Avenue is at the end of a cul-de-sac that is close to the natural area. Future development must ensure that additional roadways do not impede upon the natural areas in the neighborhood.
- The residential areas adjacent the railways must provide a landscape buffer to minimize the visual impacts and the noise of passing trains.

High Density Residential (brown)

An area of High-Density Residential has been identified in the Hawthorne Neighborhood. The area is located behind the mixed-use area along CTH E and along CTH EA. Any high-density residential development must be incorporated into the design of the mixed use. This area of high-density residential could be considered for senior housing or a senior housing complex. This location will allow seniors the opportunity to live within walking distance of the Town Hall for Town meetings and voting and will allow seniors the opportunity to walk throughout the ‘village’ visiting small retail stores and businesses.

Mixed-Use Area C (red with yellow hatch)

The Mixed-Use Area C is planned to be a mixture of commercial, office, and residential uses. The commercial and office uses would be located on the first floor of the structures with large storefront windows creating an inviting walkable ‘village’ within the Town. The residential component of the Mixed-Use Area C would then be located on the second floor of the structure. Much of the land reserved for the Mixed-Use Area C has been built upon in the past, so the reuse of the existing homes and structures will preserve the integrity of the Town and enhance the ‘village’ portion of the Town.

The reuse of existing homes along with an emphasis on a walkable Town Center will invigorate the Hawthorne Neighborhood and the Town. Future mixed-use development along CTH E must include streetscaping improvements and amenities that will assist in attracting residents and visitors to the area. Streetscaping amenities include landscaped islands, benches, decorative lighting, and traffic calming devices.

Institutional (blue)

A single institutional use is found in the Hawthorne Neighborhood. A single property is located east of the railway and owned by the Town of Somers Utility District.

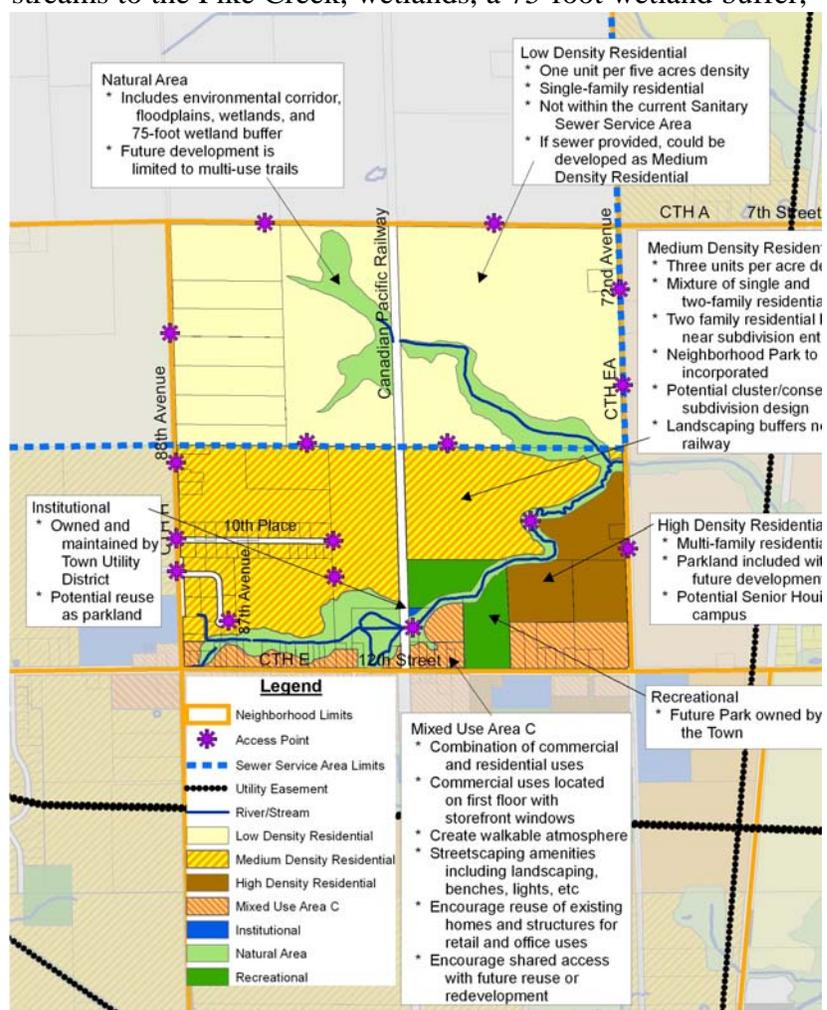

Natural Area (green)

There are several locations considered Natural Areas in the Hawthorne Neighborhood. These natural resources include tributary streams to the Pike Creek, wetlands, a 75-foot wetland buffer, and secondary environmental corridor. A small amount of the Natural Areas have been zoned Conservancy to remain protected from future development.

In order to protect the natural resources in the neighborhood, the wetlands, and their 75-foot buffer have been identified as Natural Areas on the future lands use plan. Accordingly, they are depicted in light green.

Access

Although this land use plan does not lay out a specific road pattern, access points identify the starting points for a road network that will provide good accessibility throughout the neighborhood. Finding viable access points in this neighborhood is somewhat limited due to the County jurisdiction along the County Trunk Highways surrounding the neighborhood, the Canadian Pacific Railway, and the tributary streams to the Pike Creek.

Each of the land use designations has at least two access points identified. At the eastern end of 10th Place an access point has been identified that will assist in an internal road network to be extended within the neighborhood. Access from the medium-density to the low-density should also be planned for in the future. There is no access shown at these locations due to the vastly different residential density. If sewer and water is provided for this area, the low-density could be developed as medium density where through connections will be necessary to create an internal road network within the neighborhood.

The mixed-use area C currently has an access point for each parcel. When the opportunity arises for future reuse or redevelopment, the number of access points should be reduced through shared access and driveways.

The Canadian Pacific Railway separates the neighborhood into two disconnected areas that will not be connected via a road network. It is important that with future development, significant consideration is given to the internal connectivity of the neighborhood.

Potential Development

This neighborhood plan offers the opportunity for significant future single, two, and multi-family residential with some commercial development in the Hawthorne Neighborhood. The following table identifies the total acreage for each of the future land use categories. The entire Hawthorne Neighborhood is 654 acres, but after right-of-ways are deducted from the total acreage, the Hawthorne Neighborhood is approximately 621 acres.

The total acreage minus the right-of-way is then separated into land that has been previously developed and land that has potential to be developed in the future. Not all land has future development potential. For example, the acreage planned for future natural area has not been previously developed and is not planned for any future development. The following tables will detail the future development with the anticipated timetable for future development phasing.

Table 2: Future Land Use

Land Use	Acreage	Previously Developed	Future Development	Undevelopable Land
Low Density Residential	277 acres	2 acres	275 acres	0 acres
Medium Density Residential	173 acres	31 acres	142 acres	0 acres
High Density Residential	38 acres	0 acres	38 acres	0 acres
Mixed-Use Area C	35 acres	20 acres	15 acres	0 acres
Institutional	1 acre	1 acre	0 acres	0 acres
Natural Area	76 acres	0 acres	0 acres	76 acres
Recreational	21 acres	0 acres	0 acres	21 acres
Total	621 acres	54 acres	470 acres	97 acres

Residential Development

- Low density residential located north of the current sewer service area includes single-family residential development that would be developed with the use of private septic systems at a density of one unit per five acres of land for a total of 55 new single-family houses. If the sewer service area is expanded and sewer is provided this area, medium density residential would be the appropriate planned residential use.

- Medium density residential includes a mixture of single and two-family residential dwellings. If all of the medium density residential is developed at a three unit per acre density, approximately 426 housing units could be developed.
- The high-density residential area could be developed at a density of ten units per acre. With a total of 38 acres of developable land, approximately 380 additional housing units could be developed.
- Residential uses are a component of the Mixed-Use Area C. Of the 35 acres designated Mixed-Use Area C, approximately 20 acres have been previously developed with mostly residential development. An additional 45 dwelling units of various types could be developed in Mixed-Use Area C in the neighborhood.

Table 3: Residential Development

	Developable Acreage	Density	Dwelling Units
Low Density Residential	275 acres	1 dwelling unit per 5 acres	55 units
Medium Density Residential	142 acres	3 dwelling units per acre	426 units
High Density Residential	38 acres	10 dwelling units per acre	380 units
Mixed-Use Area C	15 acres	3 dwelling units per acre	45 units ¹
Total	470 acres		906 dwelling units

¹ Three units per acre unless developed as senior housing, when density could increase to ten units per acre for a total of 70 additional units.

Although 906 additional dwelling units are possible in the Hawthorne Neighborhood, it is impractical to assume that all of the residential growth will occur immediately, if ever. The following table shows the potential residential growth every five years within the Hawthorne Neighborhood based on a slower rate of development at the beginning of the phasing schedule because the sewer and water are a significant distance from the neighborhood. Only 80 percent of the potential housing units are figured into the phasing schedule as the remaining 20 percent of the housing units may never be developed, or could be developed after the year 2035. Many factors could cause the calculated number of additional dwelling units to be inaccurate in the Hawthorne Neighborhood. Major factors include: landowner disinterest in developing their land, the distance of the planned sewer and water infrastructure from the neighborhood, fluctuation in the housing market, and the inability to divide the existing parcels to achieve maximum density based on the current configuration of the parcels.

Table 4: Future Phasing of Potential Development

	2010	2015	2020	2025	2030	2035
Percent of Potential Growth	5%	15%	15%	15%	15%	15%
Additional Housing Units in the Hawthorne Neighborhood	45	136	136	136	136	136
Total Neighborhood Housing Units	45	181	317	453	589	725

Population increases occur with housing development. These population increases must also be planned for by the Town. According to the U.S. Census 2000, an average of 2.45 people live in each household in the Town. The Kenosha County Multi-Jurisdictional Comprehensive Plan that is being developed by the Southeastern Regional Planning Commission includes future population per household based on regional models. The household population is projected to decrease to 2.43 people per household in 2035 within the sewered areas of the Town. Although only the southern half of the neighborhood is planned to be served with sewer and water through the City of Kenosha/Town of Somers Cooperative Plan, it is likely that prior to future development in the northern portion of the neighborhood the sewer service area will be expanded to be able to serve the northern portion of the neighborhood with sanitary sewer. Based on the phasing schedule of future development, the following table confirms the potential for an additional 1,762 future residents within the Hawthorne Neighborhood by the year 2035.

Table 5: Future Population from Potential Development

	2010	2015	2020	2025	2030	2035
Neighborhood Housing Units	45	181	317	453	589	725
People per Household*	2.43	2.43	2.43	2.43	2.43	2.43
Additional Population in the Hawthorne Neighborhood	19	440	770	1,101	1,431	1,762

* Kenosha County Multi-Jurisdictional Comprehensive Plan

Commercial Development

The only commercial development in the Hawthorne Neighborhood is planned for along CTH E within the Mixed-Use Area C. This area includes commercial, office, and residential development and significant redevelopment. Of the 27 acres of land planned for Mixed-Use Area C, approximately four acres have commercial development. Therefore, there is roughly 23 acres of land for future commercial and business uses.

Table 6: Future Square Feet of Development

	Developable Acreage	Assumed Right-of-Way	Buildable Area	Square Footage
Mixed-Use Area C	31 acres	3 acres	28 acres	360,000 s.f.
Total	31 acres	3 acres	28 acres	360,000 s.f.

Commercial and office growth, like the residential growth, is not likely to occur immediately. The following table illustrates a potential growth scenario for commercial and office growth. It shows the result of development at a rate of twenty percent of the total in five-year increments with the exception of the first interval.

Table 7: Future Phasing of Potential Development

	2010	2015	2020	2025	2030	2035
Percent of Potential Growth	5%	10%	20%	20%	20%	20%
Incremental Growth (square feet)	18,000	36,000	72,000	72,000	72,000	72,000
Total Development (square feet)	18,000	54,000	126,000	198,000	270,000	342,000

Nearly 20,000 square feet of additional commercial growth is planned for the Hawthorne Neighborhood over and above that which is calculated in the phasing table. The additional commercial and office growth is possible and may occur after the year 2035. There are several factors that may alter the total amount of future development potential. These factors include:

1. The ability to reuse the existing homes and structures for mixed-use redevelopment with storefronts will determine when and how the mixed-uses are realized.
2. Separate landowners own each of the parcels. If many of the landowners decide to not develop their land, large areas of potential growth will not materialize.
3. Redevelopment along the CTH E corridor is likely to require a boost of energy and strong person to champion the effort to ensure that all potential redevelopment meets redevelopment standards and that streetscaping amenities are provided.
4. The market, economy, and location of other commercial and office uses in the region will have an impact on the development of the commercial and office uses.
5. This area will be dependent upon a larger market than the Town itself. When future non-residential development occurs in the area outside the Town, developers, customers, and visitors will be affected in both their shopping desires and traffic routes.

The potential for mixed-use commercial and office development exists along CTH E within the Hawthorne Neighborhood. Development is likely to occur over a period of time and a series of phases. The factors identified and a litany of other factors may alter the amount of development.

Key Issues for Future Development

Land uses have been identified for the Hawthorne Neighborhood through this planning process. There are several issues that must be addressed prior to commencing development in particular areas of the neighborhood. The following list of issues addresses the concern for future development and a possible solution.

- Recreational trails that follow the utility easements and natural areas associated with the Pike Creek will be a valuable asset to the community if the segments are connected beyond the Hawthorne Neighborhood. In addition to the length of the trail that must be considered, points of entry onto the trail from future subdivisions and places of interest along the trail will likely increase the number of users on the trail.
- Landscaping buffers between uses and near the railway must be included with future development proposals to minimize the noise and visual impacts from the railway.
- Soils typically known to have hydric properties have been identified within the Hawthorne Neighborhood. Individual site analysis will be necessary with all future development to ensure the soils can withstand development.
- The Kenosha County Highway Department must approve all access points intersecting any County Trunk Highway.
- When the opportunity arises, access points in the mixed-use area C should be combined to create shared driveways and reduce the number of access points along CTH E.
- Access throughout the neighborhood to create an internal road network is vital for the residential neighborhoods and the mixed-use redevelopment.
- Access to a large portion of planned residential uses involves a bridge or crossing over the tributary to the Pike Creek. Future development will be restricted until the crossing is approved at both the State and County level.

- Future residential development must include future open space or parkland to provide recreational opportunities for future residents.
- The northern half of the neighborhood is not included in the sewer service area where future development is limited by septic systems. If the sewer service area is amended and expanded to include the entire neighborhood, the low-density residential area could be developed as medium-density residential.
- County Trunk Highway E must remain pedestrian friendly to provide for the safety of all residents and visitors to the ‘village’ area of the Town. Improvements such as traffic calming devices will assist in the provision of a safe atmosphere for pedestrians.
- Municipal sewer and water are currently located a significant distance east of the Hawthorne Neighborhood. Extensions of these utilities are not anticipated in the near future.

Table 8: Development Issues by Land Use Category

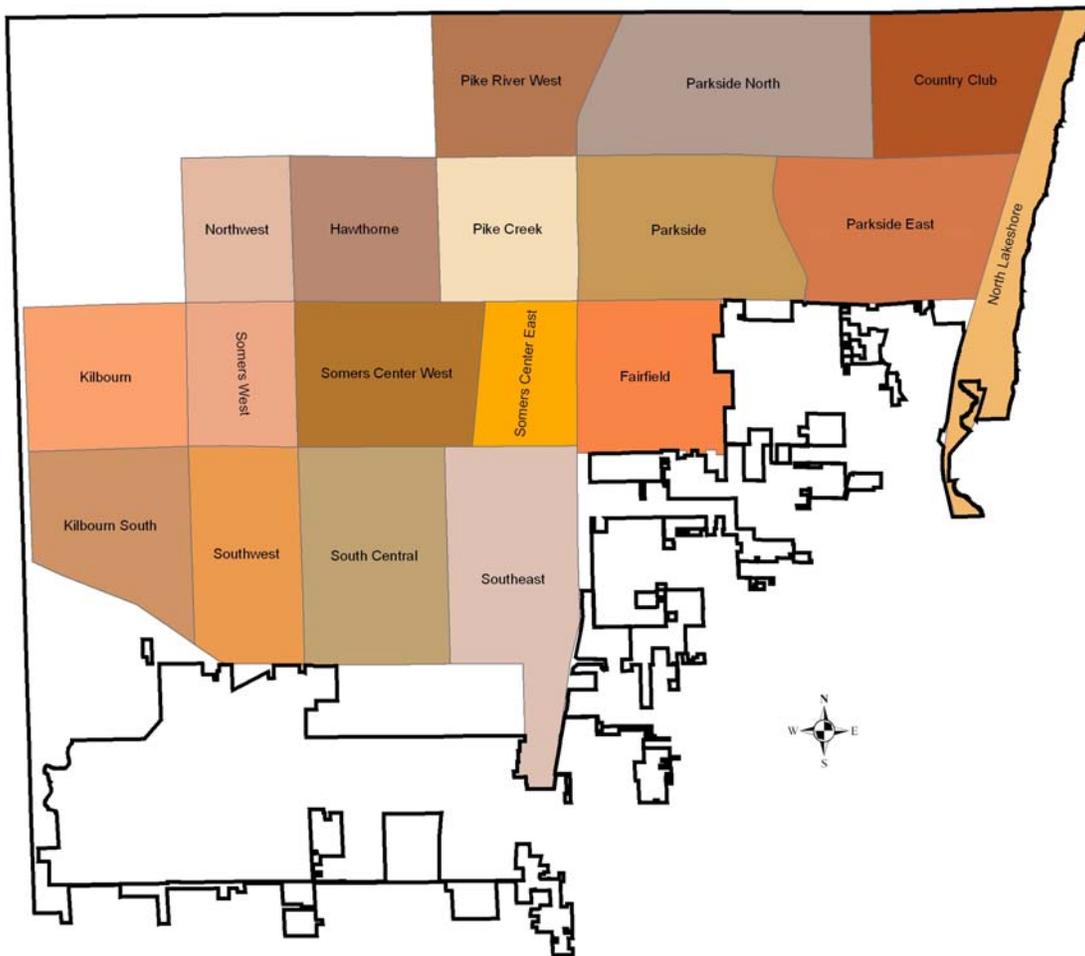

Land Use Category	Preserve Open Space	Adjacent to Floodplain	Parkland to be included with future development	Hydric Soils to be protected	Expansion of sewer service area for higher density development	Internal Road Network	Assemblage of Properties for development	Redevelopment or reuse of existing structures	Walkable design
Low-Density Residential	X	X		X	X	X			
Medium-Density Residential	X	X	X	X		X			X
High-Density Residential		X	X	X		X			X
Mixed-Use Area C	X	X		X		X	X	X	X
Institutional		X		X					
Natural Area	X	X		X					X
Recreational		X	X	X	X		X		X

As the Town implements the neighborhood plans as part of the Kenosha County Multi-Jurisdictional Comprehensive Plan, addressing the key issues will assist in balancing the positive interaction with and between the built and natural environment within the Town. The Town must ensure that developers and future development meet the intent of the neighborhood plans, the key issues, and the Town standards, which will promote a sustainable future for the Town that will create a balance between proper uses of the natural beauty of the earth with needs of society for economic growth.

APPENDIX A: THE HAWTHORNE NEIGHBORHOOD PLAN IN THE CONTEXT OF THE KENOSHA COUNTY MULTI-JURISDICTIONAL COMPREHENSIVE PLAN

The Hawthorne Neighborhood Plan is one of 18 individual neighborhood plans that, together, comprise the land use plan for the Town of Somers. These neighborhood plans explore various factors affecting land use -- such as environmental constraints, transportation patterns, availability of urban services and the like – to establish a sound basis for the recommendations that follow. The neighborhood plans then consider current development patterns, land use and zoning. The result is a future land use map for each neighborhood in the Town of Somers that provides well-reasoned direction for future decision-making.

Map 8: Town of Somers Neighborhoods

The Town of Somers was a cooperating partner in the process that led to completion of *The Kenosha County Multi-Jurisdictional Comprehensive Plan*. Section 66.1001 of the Wisconsin Statutes, often called “the Smart Growth Law”, requires that each jurisdiction address nine specified elements in its comprehensive plan. *The Kenosha County Multi-Jurisdictional Comprehensive Plan* addresses eight of the nine required elements for each of its participating municipalities.

To satisfy the remaining ninth element, land use, each participating municipality prepared its own land use plan. For the Town of Somers this was accomplished through the neighborhood plans. By focusing on individual neighborhoods, the environmental issues, transportation connections, and the cohesiveness of compatible land uses could be examined more closely. Most of the Town's geography is located within one of the 18 neighborhoods for which plans have been drafted; the remainder of Town land is found in areas that are designated as the City of Kenosha's "City Growth Area" or in the northwest corner of the Town.

The Town of Somers contracted with Ruckert-Mielke, a municipal consulting firm, to prepare the 16 neighborhood plans. The consulting planners reviewed all of the available existing plans, documents, and related data. The Town of Somers Plan Commission provided further direction through a series of public meetings held to gather public input and shape the content of each of the 16 neighborhood plans. Through a collaborative process beginning in the fall of 2007, the neighborhood plans were written, revised, discussed, considered and adopted.

The Hawthorne Neighborhood

Map 9: Year 2005 Aerial Photo of the Hawthorne Neighborhood

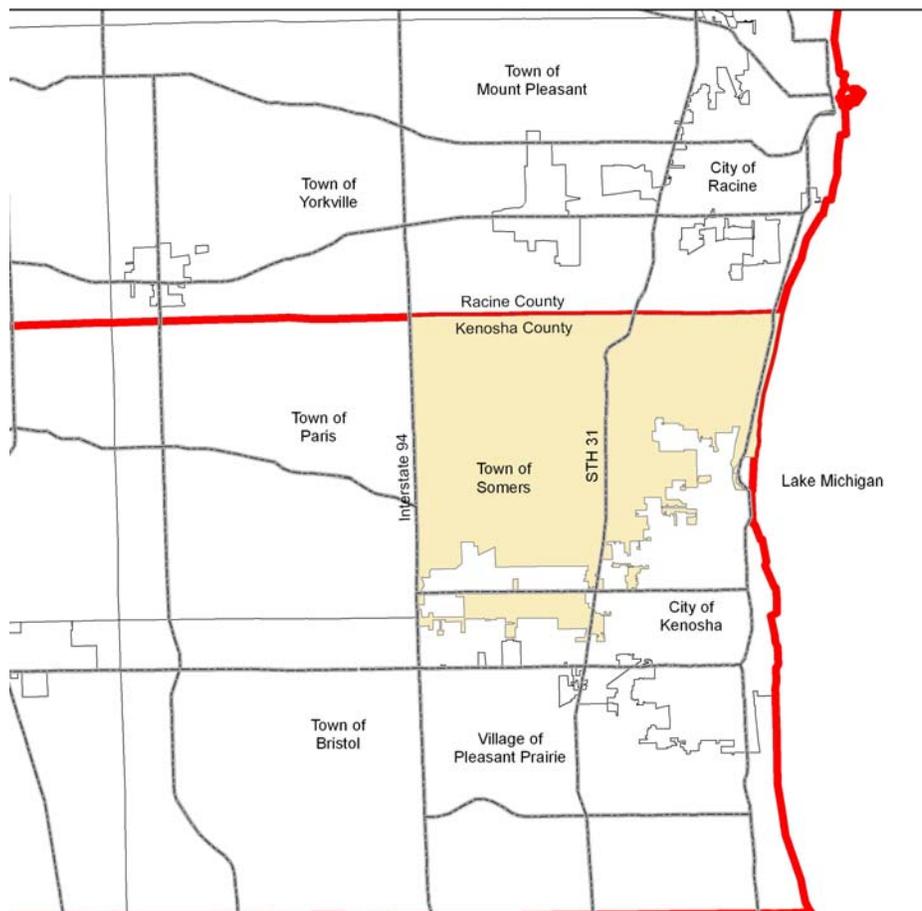

APPENDIX B: THE TOWN OF SOMERS AND ITS NEIGHBORHOODS

Due to its proximity to the Chicago metropolitan area and its location directly between the Cities of Kenosha and Racine, the Town of Somers will face increasing development pressure in the years ahead. The extent to which this is felt will vary neighborhood-by-neighborhood within the Town due to a number of factors.

Neighborhoods within the Town of Somers are distinct from one another, in large part, on the basis of their location in the Town. The Town is bounded by Lake Michigan to the east, Interstate 94 to the west, the City of Kenosha to the south, and the Racine County line to the north. Proximity to the lake, the interstate, the City of Kenosha or rural areas along the county line all have a certain bearing on both current and future land use in the neighborhoods.

Kenosha and Racine have significantly larger populations than the Town and are exhibiting typical outward expansion with new, perimeter development seen at their borders. Interstate 94, the Town's western boundary, is a highly traveled conduit between the metropolitan areas of Milwaukee and Chicago. Land within the interstate corridor is experiencing rapid development. Preparation of a Comprehensive Plan for the Town, while prompted by a statutory mandate, was essential at this time to provide the Town with the best available tool to guide important decisions that will shape the Town's future.

Map 10: Location of the Town of Somers

Population

In the recent past, the Town of Somers has experienced both a period of slow population growth and a period of a surge in population. Between 1980 and 1990, the population in the Town increased a modest 24 people, or 0.3 percent. A surge of 1,311 additional residents occurred in the decade between 1990 and 2000 representing a population increase of 16.9 percent.

The Wisconsin Department of Administration (WiDOA) attempts to estimate populations for communities during the years between the Census counts. At the beginning of 2007, the WiDOA estimated the population of the Town to be 9,361 for an increase of 302 residents, or 3.3 percent from the year 2000. From the WiDOA estimate, it appears as though the population surge of the 1990's has slowed significantly.

Planning for the future of the Town requires the use of population projections to determine the area needed to accommodate future populations. The WiDOA calculated population projections for every community in the state. As shown on the following table, the population in the Town of Somers is projected to grow at a rate between the rates of the 1980's and 1990's similar to the City of Kenosha and Kenosha County. The WiDOA projections indicate that the City of Racine will be decreasing in population in the future.

Table 9: Population Change

	Census 1980	Census 1990	Census 2000	Estimate 2007	Projection 2010	Projection 2015	Projection 2020	Projection 2025
Town of Somers	7,724	7,748	9,059	9,361	9,740	10,088	10,442	10,819

APPENDIX C: REVIEW OF EXISTING PLANS AND DOCUMENTS

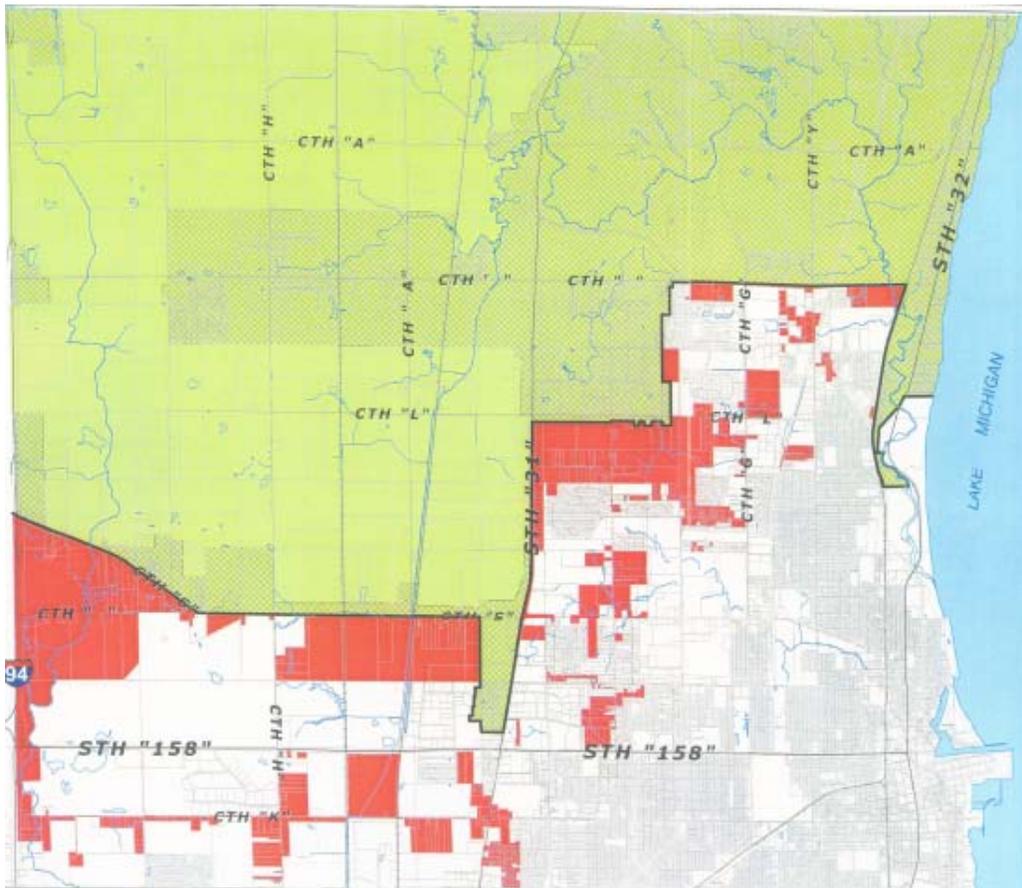

Review of current plans and agreements provided a sound background at the outset of the neighborhood planning process. A summary of the current plans and agreements relating to the Town of Somers includes:

City of Kenosha/Town of Somers Cooperative Plan

The City and Town approved the *City of Kenosha/Town of Somers Cooperative Plan* in August 2005. The purpose of the *Cooperative Plan* was to provide direction for coordinated management of growth at the city's perimeter, and to establish a plan for the extension of urban services in the Town of Somers. Through the *Cooperative Plan*, a Boundary Agreement was established, the Town and City Growth areas were defined, and arrangements for municipal services within the Town Growth Areas were documented. The "Town Growth Area" includes the entire Town with the exception of those areas that are in the "City Growth Area". Property within the City Growth Area may attach to the City of Kenosha without objection from the Town. Property within the Town Growth Area may not be annexed or attached to the City.

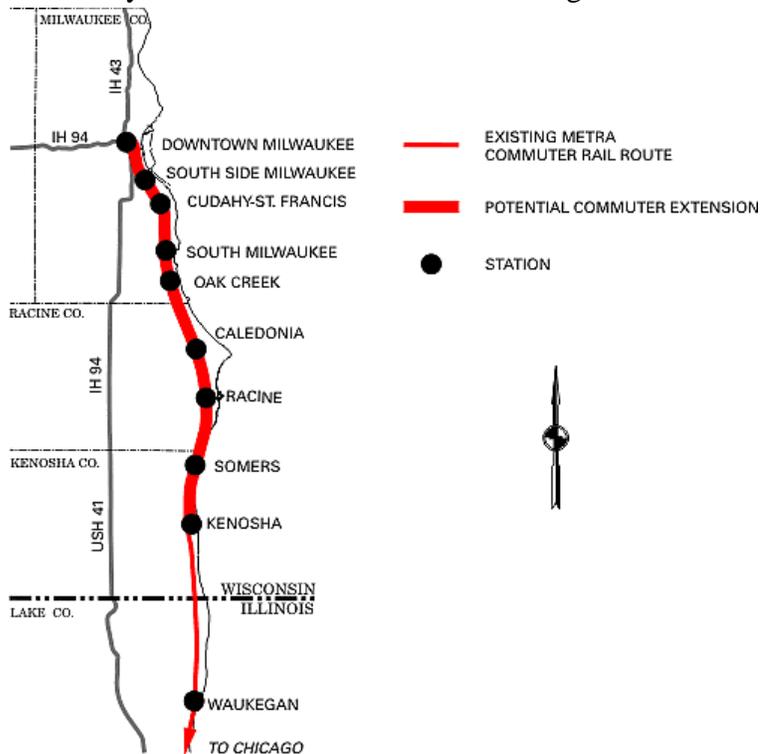

On the graphic below, found in the *City of Kenosha/Town of Somers Cooperative Plan*, the Town Growth Area is depicted in green, and Town lands located in the City Growth Area are depicted in red.

Map 11: Town Growth Area

KRM Line Proposal and Alternative Analysis

The Kenosha-Racine-Milwaukee (KRM) commuter rail, currently in the planning stages, would have significant land use implications for the Town once service begins. The proposed line would run in a north-south direction along a rail corridor that lies west of -- and parallel to -- STH 32. This stage of planning process for the proposed KRM commuter rail service is being coordinated by the Southeast Wisconsin Regional Plan Commission on behalf of the

Intergovernmental Partnership (IGP) of the Counties and Cities of Kenosha, Racine, and Milwaukee, the Wisconsin Department of Transportation (WisDOT), and the Regional Planning Commission. The Wisconsin Department of Transportation (WISDOT) and the Southeastern Wisconsin Regional Planning Commission is undertaking the Environmental Impact Study (EIS) and Project Development phase of the KRM Alternatives Analysis (AA) in order to produce a Draft Environmental Impact Statement (DEIS), refine the previous alternatives analysis, and develop further a

commuter transportation project within the corridor. Funding options are being considered at the Federal and State levels.

A Transit Oriented Development (TOD) Plan has been prepared for each segment of the proposed KRM commuter rail line. The report TOD titled *Section B: Somers - December 2006* outlined the advantages and disadvantages of each of three proposed locations for a commuter rail station in the Town of Somers.

The commencement of commuter rail service would compound the development pressure already felt in the I-94 corridor through interplay of transportation factors. If the KRM commuter rail is constructed with a stop in the Town, future commercial and residential development within the Town will occur in the vicinity of the station, along corridors radiating from it, and will intensify at the I-94 interchange.

Development Plan for Parkside East Neighborhood

Among the existing plans available for review was a completed plan for one neighborhood in the Town of Somers, Parkside East. While the current planning process will establish a plan for each of the identified neighborhoods in the Town, it is nonetheless important to review all prior planning efforts. This Parkside East Neighborhood Plan was completed in September 1993. The plan includes a recommended transportation network and urban-type land uses. As of 2007, a

small portion of the neighborhood had been developed consistent with the intent of the 1993 Neighborhood Plan. The land uses in the developed portion of the neighborhood are similar to those shown in the plan although the transportation network, as constructed, does not correspond directly with the plan.

Kenosha County Multi-Jurisdictional Comprehensive Plan

The *Kenosha County Multi-Jurisdictional Comprehensive Plan* is currently being prepared. The completed document is not yet available for review. The authors of the *Kenosha County Multi-Jurisdictional Comprehensive Plan* are collecting and analyzing information at this time. After the Neighborhood Plans for the Town of Somers are completed, they will be included in the *Kenosha County Multi-Jurisdictional Comprehensive Plan*.

Kenosha County Park and Open Space Plan

The *Kenosha County Park and Open Space Plan* highlights the recreational opportunities present and planned for the Town of Somers. Parks identified in the *Kenosha County Park and Open Space Plan* include the Kenosha County Petrifying Springs Park and the privately-operated Hawthorne Hollow Nature Sanctuary and Arboretum. The *Kenosha County Park and Open Space Plan* identifies three recreational trails located in the Town of Somers including the Lake Michigan Corridor, the Pike Creek Corridor, and the Kenosha County Bike Trail.

City of Kenosha Corridor Land Use Plan

In 1991, the City of Kenosha adopted a Corridor Land Use Plan that includes several corridors including the CTH S corridor and STH 31 corridor. The Plan includes several land uses in the Fairfield Neighborhood. These land uses include single-family residential and commercial uses north of CTH S and commercial, institutional, and single-family south of CTH S.

Perpendicular to CTH S near the railway and Pike Creek is a large area of land including in the floodplain. This area has been identified as an area that will be converted to urban use upon completion of channel improvements. Channeling the stream and associated floodplains is not a feasible option for future land uses anymore.

APPENDIX D - PLANNED LAND USE ACREAGE
